Introduction

Intel's Platform Validation Lab (PVL) validates that server platforms function in real-world environments by designing, conducting, and reporting the results of compatibility and stress testing procedures.

The following base hardware was used for test validation:

SBT2 Server Board (A26956-001)
HSBP Card PBA: 732396-501
Intel® Pentium® III Xeon™ 800 MHz processor with 256KB L2 Cache
BMC firmware v1.14
Production BIOS Release 1.2 (Build 6)
Intel® SC5000 Server Chassis with HSC firmware v0.01.

Onboard components were used throughout testing unless otherwise stated.
The following operating systems were installed and run on the SBT2 Server Board.

- Microsoft Windows* 2000 Advanced Server
- Microsoft Windows NT* Server v4.0 Enterprise Edition with Service Pack 6
- Novell Netware* 5.1
- Novell Netware* 4.2 with Service Pack 8
- RedHat Linux* 6.2 System Builder Edition 2
- RedHat Linux* 5.2
- SCO UnixWare* v7.1.1
- SCO UnixWare* v2.1.3

Pass/ Fail Criteria

Specific configurations may have had particular characteristics that were addressed on a case-by-case basis.

In general, a configuration passes testing if:

The operating system installed without error.

- Manufacturer's installation instructions or PVL Best Known Methods (BKM) were used.
- No extraordinary workarounds were required.
- The system behaved as expected during and after installation.
- Applications installed subsequently executed normally.

Hardware compatibility tests run to completion without error.

Test suites execute successfully.

- Test/Data files are created in the correct directories without error.
- Files copied from client to server and back compare to the original with 0 errors reported.
- Clients remain connected.

Industry standard test suites run to completion with zero errors reported.

Hardware Tested

The following table contains a complete list of all hardware peripherals that were configured in the SBT2 Server for these regression compatibility and stress runs.

	Microsoft Windows* 2000 Advanced Server	Novell NetWare* 5.1	SCO UnixWare* 7.1.1	RedHat Linux* 6.2 SBE2
