Using the Pocket PC for the first time

If you are opening this product for the first time, the main battery and the Pocket PC are packed separately inside the product packaging.

Installing and removing the SIM card

- Before installing the SIM card, launch Communication Manager, then tap the button. When the color of the icon turns orange this indicates that the Pocket PC wireless connection is disabled.
- 2. Press the Power key to turn the screen off.
- Disconnect the USB cable or AC adapter if either of them is connected to your Pocket PC. Removing the SIM card or battery while the Pocket PC is connected to a USB cable or AC adapter may damage your device.

English

4. To install the SIM card

Open the slot cover and insert the SIM card with its cut-off corner facing toward the inside of the slot. Remember to close the slot cover.

5. To remove the SIM card

Press the SIM card to pop it out of the slot.

6. To install the battery

Charging the battery

Do not remove the battery while charging.

- Connect the AC adapter plug to any household power outlet.
- Connect the AC adapter's other plug into the USB port. The Pocket PC will start charging automatically.
- If you need to connect your Pocket PC to a computer, connect the USB cable to the USB port. Then connect the other end of the USB cable to a USB port on the computer. Your Pocket PC will also be charged while connected.

- It will take about eight hours to fully charge the battery the first time. Subsequent charging will only take about three hours. After charging, you can disconnect the AC adapter to take your Pocket PC with you. To ensure smooth operation, charge the battery regularly.
- 2. The battery icon **equals** in the upper right corner of the screen indicates remaining battery charge.
- 3. The LED indicator on the right of the Pocket PC indicates the charging and function status.

Red	Red: Device is charging.
	Red flashing every four seconds: Battery level low;
	missed calls or unread messages.
	Repeatedly flashing red twice: Battery level critical.
Green	Green: Battery fully charged.
	Green flashing every four seconds: GSM is connected
	and on line.

4. The LED indicator on the left of the Pocket PC indicates connectivity status.

Blue	Flashing blue every four seconds: Bluetooth enabled
Amber	Flashing amber every four seconds: WLAN enabled
White	Flashing white every four seconds: GPS enabled

Re-installing or replacing the battery

If the phone, GPRS or wireless LAN connection are already activated, deactivate them first and then replace the battery.

- 1. Remove the battery cover.
- 2. Release the battery lock.
- 3. Replace the battery and secure it properly. When you remove the battery, your Pocket PC will enter sleep mode.
- 4. Slide the battery cover into the groove and click it shut.

Synchronization

If you use Outlook on your PC, you can synchronize e-mail, contacts, calendar and more with your Pocket PC.

1. Install the synchronization tool on the PC.

Install the synchronization tool before connecting your Pocket PC to your PC using the USB cable.

Install the software from the Getting Started CD or download it from http://www.microsoft.com/downloads/ to install the synchronization tool.

2. Set up a partnership

Connect your PC and Pocket PC with the USB cable and then turn on your Pocket PC. When your PC detects your Pocket PC, it will start the synchronization tool wzard. Follow the onscreen instructions.

Once the wizard has finished, data synchronization will begin.

Restarting the Pocket PC

You should restart your Pocket PC if it is unable to maintain normal operation, does not response or if the screen is frozen.

You have three choices:

1. Reset	Resets the Pocket PC and retains all your
	data and custom settings.
2. Restore default	Use this when the touch screen is
settings	functional. It will restore Windows Mobile
	and factory-installed programs. You will
	lose all your data and custom settings.
3. Cold Boot	Force a hardware cold boot: You have the
	option of a simple reset or restoring the
	default settings.

English

To reset your Pocket PC Press the Reset key using the stylus tip.

- You should restart your Pocket PC if it is unable to maintain normal operation, does not response or if the screen is frozen.
- The Pocket PC will boot to the Today screen. This will retain Microsoft Windows Mobile, factory-installed applications, your data, other installed programs and custom settings.

Cold boot

To cold boot your Pocket PC Hold the Power key with one hand while using stylus tip to push in the Reset key with the other. Simultaneously release both the Power key and Reset key.

- Only do this if you have already tried to reset using another method, and your Pocket PC is still not operating normally, is not responding or the screen is frozen.
- There are two options for cold booting; please refer to the information below, and decide which option you will try.
- Don't press any key after the cold boot and allow the Pocket PC to boot to the Today screen. This is identical to the reset described earlier.
- 2. If you have tried the previous methods, and they have not solved the problem, then you may:
- Press and hold both Power key and Reset key for a while, then release them simultaneously.
- Wait for a few seconds until the screen wakes up displaying the model name, firmware version and firmware build date of your device, immediately press and hold Record key.
- Continue pressing Record key and release it when you see an inquiry box shown on the screen.

CErase all data and load default? Yes [press CAMERA button]

This operation will delete all the data you stored on your device and restore it to factory default settings.

- If you press camera button upon seeing Yes [press CAMERA button] at the bottom of screen, all the data you stored, programs you installed and customized settings you made on your Pocket PC will be cleared. Follow the onscreen instructions to complete the resetting after the Pocket PC reboots.
- If you do not press the camera button, the Pocket PC will wait a few seconds and then cancel the procedure.

E Caution!

- This will erase all your data, any programs you installed and your settings. It will load Microsoft Windows Mobile and the factory-installed programs.
- If you want to retain your data, programs and settings you can only:
- 1. Perform a reset.
- 2. Perform a clean boot, and don't press any key when the system inquiry screen is displayed.
