

There's more to Acrobat[®] than Reader[™]!

Take the next step and convert all your documents to Adobe[®] PDF files. Adobe PDF documents look great every time, and they can be read with Adobe Acrobat Reader[®] on Pocket PC and Palm OS[®] devices.

How often does this happen to you?

You complete an important document just under the wire and e-mail it to your colleagues, but they can't open the file because they have a previous version of the software and they work on a different platform.

You distribute an eye-catching new brochure for comments. But when your colleagues open the electronic file, text columns are askew, the logo has vanished, and computers have substituted Courier for the elegant font you selected. Your reviewers give you their comments, but you can't read their handwriting or decipher their mark-ups.

Sound familiar?

Then you need Adobe Acrobat 5.0 software on your computer.

The best way to share documents online

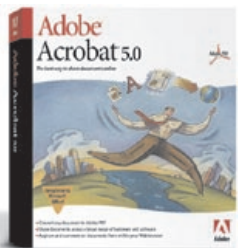

Acrobat 5.0 lets you convert any document to an Adobe Portable Document Format (PDF) file. Adobe PDF files created from Microsoft Office 2000 and Office XP for Windows[®] can be read on a Pocket PC device using the free Acrobat Reader for Pocket PC software, and on a Palm OS handheld using the free Acrobat Reader for Palm OS software. With Acrobat 5.0 on your desktop, you can:

- Share information with your extended enterprise: Adobe Acrobat is the best way to share documents across a broad range of hardware platforms, software applications, and software versions.
- Protect corporate brand elements: Turn any document into an Adobe PDF file that anyone using Acrobat Reader can view.
