Open Issues in Version 88.61

As with every released driver, version 88.61 of the Release 85 driver has open issues and enhancement requests associated with it. This section includes lists of issues that are either not fixed or not implemented in this version. Some problems listed may not have been thoroughly investigated and, in fact, may not be NVIDIA issues. Others will have workaround solutions.

- Windows Vista x86/x64, Battlefield 1942 crashes after a minute or so of gameplay.
- Windows Vista x86: GeForce 7900 GTX, GeForce 7800 GS: Shadows are white in Dungeons & Dragons online.
- Windows Vista x86, GeForce 7900 GTX: Corruption appears when flipping through video clips.
- Windows Vista x86, GeForce 7900 GTX: File-copy animation corrupts when performing multiple file copy operations.
- Windows Vista x86/x64, GeForce 6 Series, GeForce FX Series: Battlefield 1942 vehicle and troop shadows are white.
- Windows Vista x86, GeForce 6800/6600: The system crashes when running the Photo Screen Saver.
- Windows Vista x86, GeForce 6800, GeForce FX 5900: Graphics corruption occurs while playing NHL 2006.
- Windows Vista x86, GeForce 6600: With Multimon enabled, DirectX 9 Sample Billboard shows flashing corruption.

Not NVIDIA Issues

This section lists issues that are not due to the NVIDIA driver.

- Window Vista, All GPUs: Installing a new driver will sometimes result in a black screen or no display.

This is an issue with the current Windows Vista installation process. This can be worked around using the following instructions.

- 1 Uninstall all old drivers on your system using Device manager -> Display Adapter -> uninstall.
- 2 Unzip the new driver package to a temporary folder on your desktop.
- 3 Open the file **nv*.inf** for editing, locate the [Version] section, and modify the date in the **DriverVer** line as follows:

```
; NVIDIA Windows Vista Display INF file
; Copyright (c) NVIDIA Corporation. All rights reserved.
```

```
[Version]
Signature   = "$Windows NT$"
Provider    = %NVIDIA%
ClassGUID   = {4D36E968-E325-11CE-BFC1-08002BE10318}
Class       = Display
CatalogFile = NV_DISP.CAT
DriverVer   = 03/10/2006, 8.7.4.4
```

modify the line above to:

```
DriverVer   = 03/11/2006, 8.7.4.4
```

- 4 Save the change and install the driver using the revised INF.

The driver should now install with no problems.

*Any time you attempt to reinstall a driver that has been previously installed on that system, you must change the **DriverVer** date in the INF.*

- The default video decoders in Windows Vista do not yet take advantage of hardware acceleration.

Driver Installation

Minimum Hard Disk Space

The hard disk space requirement is minimum 30.5 MB.

Installation Instructions

This driver does not include an Installshield. You must use the INF installation to install this driver as follows:

- 1** Follow the instructions on the NVIDIA .com Web site driver download page to locate the appropriate driver to download, based on your hardware and operating system.
- 2** Click the driver download link.
The license agreement dialog box appears.
- 3** Click **Accept** if you accept the terms of the agreement, then either open the zip file or save the file to your PC.

- 4 Extract the files to a temporary folder folder on your hard drive.
- 5 Go to the Windows Device Manager, right-click the display adapter and then click **Update driver** from the pop-up menu.
- 6 Install the driver using the INF that you downloaded.
Windows may default to 16bpp color after the driver install and disable the Desktop Window Manager (DWM). To work around this issue set the color to 32bpp and reboot the PC.

MODE SUPPORT FOR WINDOWS

This chapter details the Windows modes supported by the Release 85 driver for NVIDIA products. It contains these sections:

- “General Mode Support Information” on page 14
- “Default Modes Supported by GPU” on page 15
- “Modes Supported by DACs and TV Encoders” on page 31

General Mode Support Information

The NVIDIA graphics driver includes a standard list of display modes that are supported by default. These modes are listed in the section “[Default Modes Supported by GPU](#)” on page 15.

The actual modes available depend on the capabilities of the display. In addition, the NVIDIA graphics driver has a “dynamic EDID detection” capability and will make available *additional* modes that are listed in the display EDID, provided the graphics hardware can support it.

The NVIDIA graphics driver also supports the high resolutions available with the displays listed in [Table A.1](#) as well as the non-standard modes listed in [Table A.2](#).

Table A.1 Modes Supported for High Resolution Displays
